

# Virginia Alternate Transportation Fuels Production Report 2009

January 15, 2010  
Virginia Clean Cities

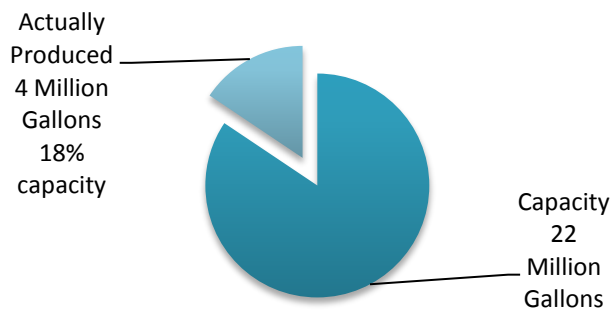

For the quarter ending December 31, 2009, 2,521,354 gallons of alternative fuels were produced and reported by 5 production companies in Virginia. For this reporting year, all of these fuels were Biodiesel. The reported feedstock for these fuels was petroleum fat, soybean oil, waste food oils, and canola oil. This report contains information for fuel production from 2008 and 2009 years to establish a baseline for alternate fuels production tracking. The report for 2010 will represent additional types of fuels as large scale ethanol production begins in Virginia.

The production for the year represents a 38% decline of approximately 1.5 million gallons of fuel from the 2008 year, where 4,065,785 gallons of alternative fuels (all biodiesel) were produced.

Production capacity reported by Virginia producers was 22 million gallons of alternate fuels. For this reporting, all fuel was biodiesel. This represents a production rate of 11% of capacity.
